What If You Could Access Data From the Medicaid State Summary DataMart Every 3 Months?

The Medicaid Statistical Information System (MSIS) State Summary

Datamart <http://msis.cms.hhs.gov/>, provides ready access to quarterly and monthly data cubes for each fiscal year (FY) beginning with FY 1999 (October 1998-September 1999). CMS developed this system to provide State-specific and/or national data quickly and efficiently to states and others with a need for such data. The quarterly and monthly data cubes contain measures and dimensions of the most commonly asked statistical questions. This session will demonstrate how this datamart can contribute data for national and state oral health surveillance and oral health program planning and monitoring. Participants will be able to: 1) Describe how Medicaid data relates to Healthy People 2010 oral health objectives; 2) Discuss how Medicaid data can be used to track indicators for the ASTDD State Synopsis (several indicators here) and NCQA (thinking of dental visit in past 12 months unless others develop between now and the presentation); and 3) Use the MSIS State Summary Datamart Web query system to produce quarterly and monthly tables for state oral health surveillance and program planning.
